RETURN OF PRISONS AND PRISONERS.

Replies to the Questions, compiled from the Returns of the respective Superintendents.

QUESTION I.

If the prison is on the separate system, is the separation complete? And if not, what is the separation enforced by day and night, respectively?

All the penal stage prisoners of the Island, if sentenced to over a month, are passed through one of the following jails:—Welikada, Kandy, Jaffna, Anuradhapura, Galle, and Batticaloa.

In these jails the penal stage prisoners are worked on the separate system. They are confined in separate cells, and are worked in stalls. They are marched from their cells to the stalls in single file three paces apart, and are not allowed to speak or communicate with each other at all. Prisoners not in penal stage are not worked on the separate system.

QUESTION II.

If not on the separate system, what provision is there for the supervision of the prisoners while in association ?

The males are supervised by male officers of various grades, and the females by matrons, in all jails.

QUESTIONS III. AND IV.

How many cells are there ; and how many associated wards ? Taking the *average* number of prisoners in jail, how many cubic feet of space are there for each prisoner during the hours of sleep ?

METEOROLOGY.

General Remarks.—There is a marked variation in climate between the different parts of Ceylon. In the low-country, with a mean temperature of the order of 80° F., a noticeable feature is the small range of both temperature and pressure. There is, however, wide divergence between the moist conditions in the south-west of the Island, where the average annual rainfall varies from 100 to over 200 inches, and the dry zone areas of the north, north-west, and south-east.

2. Altitudes up to 8,000 feet occur inland, and there the temperature is cooler, and shows a bigger range. There is a corresponding change in vegetation, and the conditions are altogether more akin to those in the temperate zone.

3. *Rainfall.*—The areas whose total rainfall for the year 1922 was above average, include most of the east and north-east coast, and most of the west coast, from Kalutara to Mannar except for the neighbourhood of Chilaw. Inland there was an area above average stretching north-eastward from Negombo to Kurunegala, and also a strip on the exposed south-west face of the main hills although there was a deficit on both sides of this strip, *i.e.*, in the low-country of Sabaragamuwa and among the central ranges. Another district where averages were reached was in the extreme south-east of the hill country near Koslanda. In the remainder of the Island—which amounts to a good deal more in extent than the areas mentioned above—the rainfall of 1922 was below average.

During the south-west monsoon the wind was rather above normal strength and for those months there was a marked excess of rain on a narrow belt on the south-west face of the hills, and a marked deficit in most of the remainder of the Island amounting at some places to a severe drought. Turning to questions of absolute quantity the new station at Blackwater Estate (Nawalapitiya) heads the list with 228·4 inches on 217 rainy days. Carney Estate (Ratnapura) being second with 221·7 inches on 230 rainy days and an average of 215·8 on 227 days. At the other end, Hambantota (33·6 on 101 days) and Ambalantota (27·6 inches on 72 days) were the lowest though Marichchukkaddi, which recorded 39·9 inches on 53 days this year, still holds the lowest average, namely 33·6 inches in 56 days. The longest period of consecutive wet days was 47 at Elpitiya. Several stations in the north, north-west, and south-east of the Island recorded hardly anything during the south-west monsoon, but it is hard to give figures with confidence for the precise number of consecutive days without any rain. The rainfall at Colombo (Cinnamon Gardens) was 87·82 inches in 169 days, or 8·31 inches above average. At Kandy 79·35 inches were registered in 184 days, while the rainfall at Nuwara Eliya was 92·47 inches in 219 days.

4. *Temperature.*—The station showing the highest mean shade temperature for the year was Trincomalee with 83·0° F., and the lowest Nuwara Eliya with 59·6° F. The figures for Colombo and Kandy were 80·7° F. and 76·4° F., respectively.

The highest shade temperature recorded during the year was 101·3° F. at Kurunegala on April 1. The highest on record is 103·7° F. at Trincomalee on May 12, 1890. The lowest this year was 31·5° F. at Nuwara Eliya (6,000 feet above sea level) on February 24, at which station 27·1 was recorded in 1914.

The highest shade temperature at Colombo in 1922 was 95·5° F. on April 5, and the lowest 65·1 on December 10 and 13.

The main daily range, *i.e.*, the difference between the mean of the maximum and the mean of the minimum, was highest at Badulla 18·6° F., and lowest at Galle 8·1° F. At Colombo and Kandy it was 12·2° F. and 15·5° F, respectively. The absolute range for the year, *i.e.*, the difference between the highest and the lowest readings actually recorded at any one station, was greatest at Nuwara Eliya (46·7° F.), and lowest at Galle (22·9° F.).

5. The mean annual temperatures were a trifle below average at the west coast stations and a trifle above elsewhere. Galle (—0·6° F.) was the only station whose offset for the year in either direction was so much as half a degree. In January no station was below its average and in December all stations were below—in most cases by about a degree.

6. The tables in this year's report are in the main similar to those published last year. A slight addition has been made in including rainfall intensity figures from Labugama as well as Colombo, and another improvement appears in the table re wind velocities.

In the above table the tendency for both extremes to occur at the same time of year is noteworthy, and calls attention to the fact that in the tropics variations in cloudiness have a greater importance relatively to variations in the sun's declination than is the case in the temperate zones.

TABLE VIII.—Percentage Humidity for 1922 calculated from the Dry and Wet Tables issued by the Indian Meteorological Department. Figures in ordinary type are from the 9·30 and 3·30 readings, and so derived from temperatures that are rigidly comparable to each other, but give no detail of night conditions. The figures in italics give the mean of the humidity as derived from the maximum temperatures and as derived from the minimum. This only admits of approximate physical interpretation, since the dry and wet thermometers do not necessarily reach their extreme values simultaneously. It is, however, a serviceable approximation for several purposes, as it does include an indication of the conditions at night.

With regard to the high values at Hakgala, it may be mentioned that this shed, unlike the majority of sheds, is directly shielded by a considerable number of trees.

TABLE IX.—Average Monthly Air Pressure of Stations in Ceylon up to 1922 inclusive in inches of mercury corrected to 32° F. sea level and 45° latitude. The values given are at 9.30 and 15.30, which are practically the maximum and minimum values. The whole number is 29 inches throughout, except in the case of Nuwara Eliya. For this station (altitude 6,200 feet) the readings are not reduced to sea level, and the figures given are corrected to 32° F. only.

* The afternoon figures at Batticaloa in March, 1922 were cancelled. This average is therefore the same as in last report and no offset is given in the next table.

TABLE X.—Offsets of the 9.30 and 15.30 Air Pressure Readings of the Year 1922 from the Average.

One of the most noteworthy features of this Table is the consistent excess in November. In that month small depressions are sufficiently frequent to have a distinct effect on the averages, and the absence of such a depression in November of this year shows very clearly.

TABLE XII.—High Velocities of Wind at Colombo (Fort) during 1922.

This Table gives the times at which the highest velocities were recorded at Colombo (Fort). In the absence of the recent Kew certificates for the instruments concerned, the numerical values below must only be accepted as approximations roughly comparable among themselves, but not precise. The time given is Ceylon Standard Time: 5½ hours ahead of Greenwich. The instrument was never out of action for a prolonged period though in several cases the breakage of a wire or stoppage of the clock have resulted in gaps of a few hours in the record.

HARBOURS.

QUESTIONS.

At bar or entrance, what is—

(1) The minimum width ?

(2) The minimum navigable depth, low water ordinary spring tide ?

(*Note.*—If between the entrance and the deep sea there are bars or shoals where a lesser depth occurs than the minimum indicated above, a list of such obstructions and of the depths over them (low water ordinary spring tide) should be given.)

2. In the approach channel from bar or entrance to berthing accommodation, what is—

(1) The minimum and maximum width ?

(2) The minimum and maximum depth, low water ordinary spring tide ?

3. What is—

(1) The rise and fall of tides—

(*a*) Ordinary springs ?

(*b*) Ordinary neaps ?

(2) The rise of ordinary neaps above low water ordinary spring tide ?

4. What is the maximum available depth of water—

(*a*) At piers or wharves low water ordinary spring tide ?

(*b*) In the case of enclosed docks in the entrance locks, if any, and at dock quays, high water ordinary neap tide ?

5. What are the respective lengths of piers, wharves, or (in the case of enclosed docks) dock quays, where the maximum depth of water, referred to in Question 4, exists ?

What percentage does the total of these lengths bear to the total accommodation at the port ?

6. What are the dimensions (length, loaded draught, and beam at that draught) of the largest vessels which, under existing circumstances, can be—

(*a*) Berthed alongside any pier or wharf (low water ordinary spring tide) ?

(*b*) In the case of enclosed docks—

(1) Admitted direct to ; or

(2) Admitted through the entrance lock of any important dock or docks, high water ordinary neap tide ?

7. What are the dimensions (length, breadth, and depth over sill high water ordinary neap tide) of the largest dry dock or floating dock in the port ?

8. Are operations in progress to increase the depth of water—

(*a*) At the entrance and in the approach channel ?

(*b*) In the case of enclosed docks at the entrance lock, if any, of any important dock or docks ?

(*c*) At the principal berths to 40 feet at low water ordinary spring tide (in the case of the berths at enclosed docks, high water ordinary neap tide), and is accommodation being provided for vessels 1,000 feet in length and of 100 feet beam ?

If not, to what extent is deepening being effected, and for vessels of what dimensions (length, draught, and beam at that draught) is accommodation being provided or in contemplation ?

3. (1) (*a*) Ordinary springs .. .. .. Ft. 2
(*b*) Ordinary neaps .. .. .. In. 8
(2) Rise of ordinary neaps above low water ordinary spring tide (about) .. .. In. 12

4. No enclosed docks. All vessels lie out under the shelter of the breakwaters, and are loaded or discharged from lighters. Practically all of the western half of the harbour within the limits of dredging has a minimum depth of 31 feet below low water ordinary spring tide, but the greater portion of this is 33 feet deep. Practically all the eastern half has a minimum depth of 27 feet, but a considerable portion is 30 feet in depth or more.

A commencement has been made near the western entrance to dredge the north-western portion of the harbour to 36 feet at low water ordinary spring tides, but it will take some years before the scheme is complete. One berth in both seasons is now complete for vessels drawing 33 feet of water.

One jetty for the discharge of oil and two for bunkering fuel oil have been erected in the harbour near the eastern entrance, and it is expected that the dredging for these will be completed in a short time.

5. See answer to Question 4.

6. The largest vessel berthed in Colombo Harbour is the H. M. S. "Renown"; length 794 feet, breadth 90 feet, and draught 31 feet. With the existing arrangement, in addition to the berth for vessels of 33 feet draught, three vessels of 650 feet length and beam in proportion and 30 feet loaded draught can be berthed. With slight alterations longer ships could be berthed.

7. The dimensions of the Graving Dock are—

	Ft.	in
Length	711	0
Breadth	85	0
Depth over sill high water (ordinary neap tide)	30	8
